

Good for Enterprise: Android™

Support and Manage Android-Powered Devices While Keeping Company Data Safe

Your employees love the convenience, versatility, and portability of their Android™-powered devices and want to use them to access corporate email outside of the office. You want to offer employees the convenience of mobility while keeping corporate data and connections secure. Good for Enterprise™ is a safe, cost-effective way for employees to access corporate data while on the go. And you get to rest easy knowing that sensitive corporate data is highly secure, yet simple to access.

The Good for Enterprise app runs on a wide range of Android-powered devices and tablets, and is used by leading enterprise companies who require highly secure access to enterprise data for their mobile workforces.

➔ SECURITY FIRST

Good for Enterprise uses patented end-to-end security that protects corporate data along each phase of delivery to all provisioned Android-powered devices. Over-the-air transmissions and enterprise data at rest on the devices are secured with industry-leading AES-192 encryption.

No need to make complex changes to your firewall settings or set up complicated new inbound connections—all Good servers are deployed behind the firewall with a secure outbound connection using standard port 443. Corporate data stays completely protected without disruptive changes to your current infrastructure.

➔ CORPORATE DATA, SECURELY CONTAINED

Good for Enterprise is a securely contained environment. Data is encrypted from the corporate server, and secure access stays within the Good for Enterprise application.

Employees access corporate email, contacts, and calendar through the convenience of the dedicated Good for Enterprise application on their Android-powered devices, just as they access Microsoft® Outlook® or IBM® Lotus® Notes® on desktop computers at the office.

Outside of the application, business and personal data don't mix, preventing potential data loss or leakage, often the result of business apps contaminated by consumer apps.

➔ VISIBILITY AND CONTROL

Good for Enterprise is not only a versatile application for your employees' portable devices, it also allows you control over your mobile workforce. Troubleshoot issues with total visibility into your staff's Android-powered devices.

Protect corporate data through easy-to-apply policies, such as requiring passwords and preventing cut/copy/paste from the Good app. Perform remote wipe of enterprise data only, leaving personal data intact. Empower your employees with basic tasks, including the ability to add or remote-wipe their devices with an easy-to-use Web-based utility.

➔ WEB-BASED MANAGEMENT

Access a universal dashboard through any Web browser, and instantly view and manage all mobile devices in your workforce. Provision new Android-powered devices, enforce passwords, distribute custom or 3rd party enterprise applications, establish role-based policies—from virtually anywhere, anytime. In short, spend less time managing software and more time protecting business data.

Good for Enterprise: Android

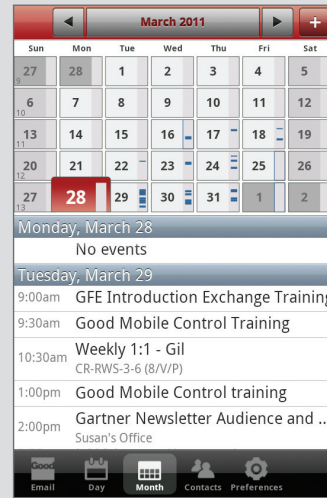

SECURE FEATURES THAT ARE EASY TO USE

A password dedicated to the Good for Enterprise app creates a secure connection.

Connect with your email inbox, just as you would in the office. Push notifications keep you updated with all activity in your account.

Keep up to date – the calendar securely synchronizes, allowing you to accept, decline, or schedule meetings from your Android-powered devices.

FEATURES	BENEFITS
Web-based management console	Easily manage and troubleshoot Android-powered devices, as well as those on other platforms, from any Web browser
Over-the-air management and administration	Provide easy and scalable deployment to employees
Role-based administration	Assign rights and permissions for different roles (managers, staff, administrators) so employees can perform tasks related to their jobs
Policy-based management	Create custom policies for different user groups and assign to one or multiple users at once
Enterprise Application Distribution	Securely distribute approved custom or 3rd party applications outside the Good container.
AES-192 end-to-end encryption	Ensure enterprise-class data protection
Remote wipe	Quickly and effectively delete the Good application and all encrypted corporate data if phone is lost or stolen—or wipe the entire device in situations that require it
Email, calendar and contacts provided through a single, easy-to-use application	Convenient, intuitive app enhances productivity
Complete calendaring and scheduling	Schedule and manage meetings from your phone while on the go
